

Session 8 :
Nov 24th - 2020:

Task for the day:

Give the final payload value and http status for each scenario.

Note: For each scenario , consider we have Global error handler and global element is configured as well.

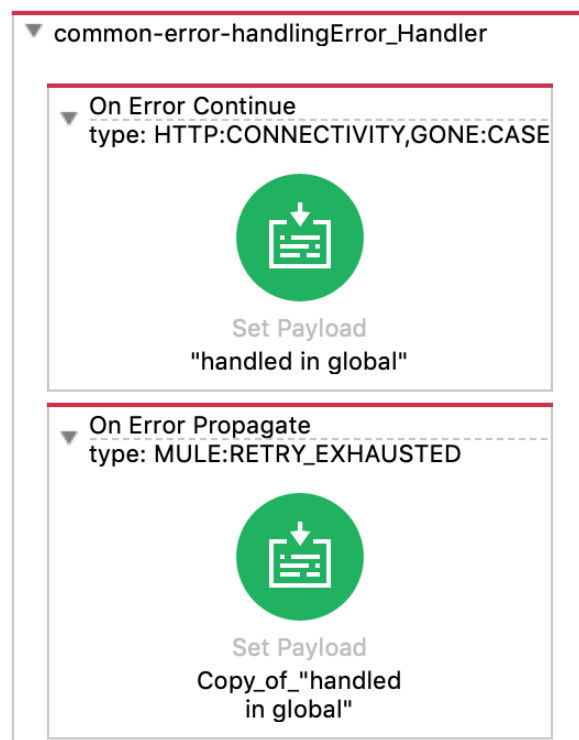

So please check accordingly and answer.

Note: remember the point where I said when **errorType** doesn't match, will it go to **Global error handler** or not!

Hint: Implement the same logic and get the results

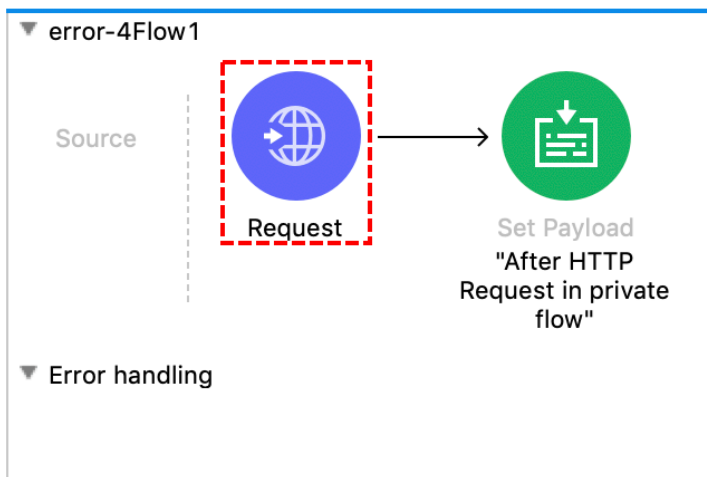

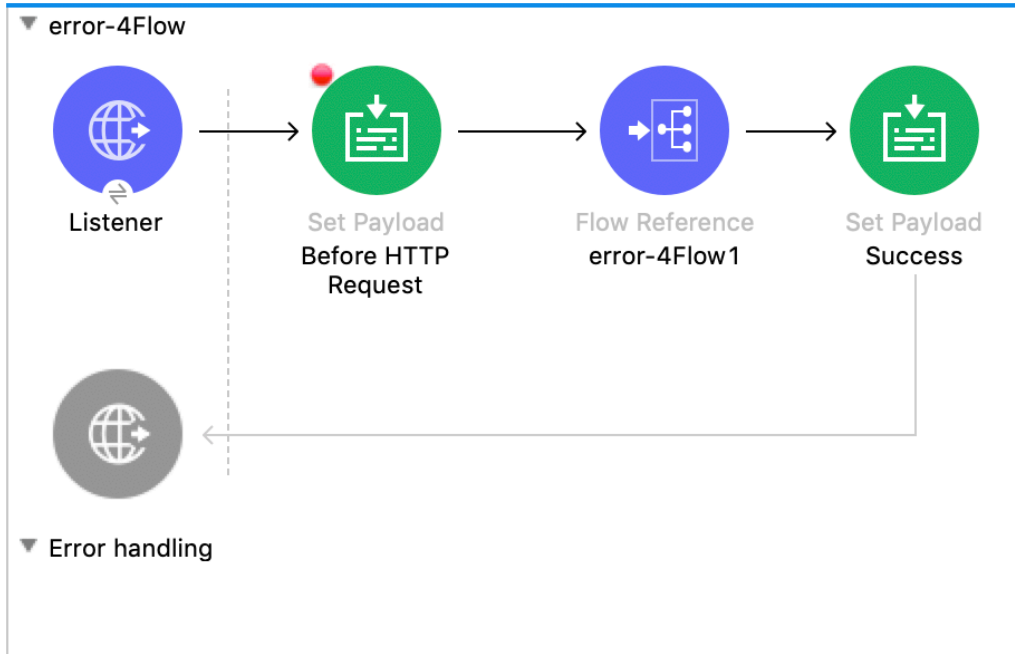

Remember :

1. Whatever Display name you see in SetPayload component is the actual payload set (refer to my video)
2. Http Listener Error Response body is set to Payload for all scenarios
3. consider we have Global error handler for all scenarios
4. If I write Display name as "Set to null" , then remember I have set null value for that set-payload
5. Follow the 3 rules . Consider Global error handler whenever needed
6. Answer correctly for Raise error
7. Read above instructions carefully
8. Global Error Handler:

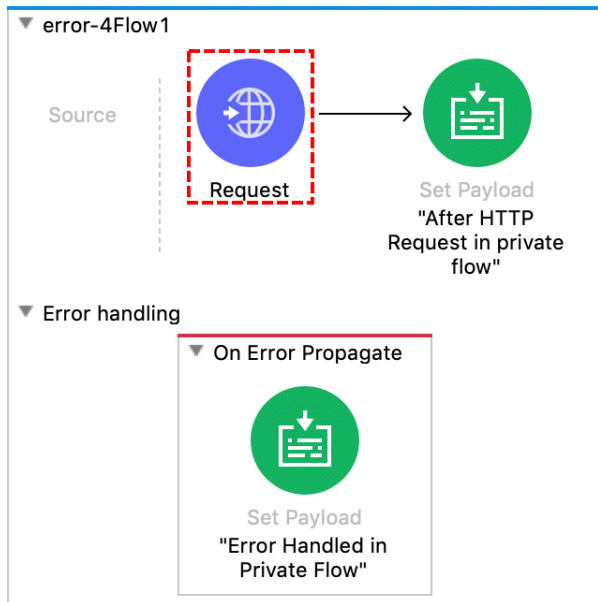

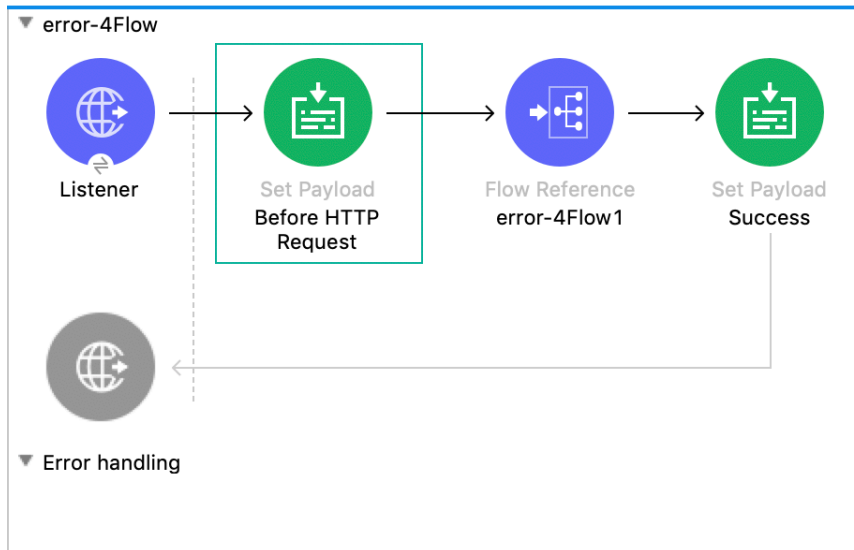

Assume that in all scenarios wherever HTTP is there, it is raising HTTP:CONNECTIVITY errorType

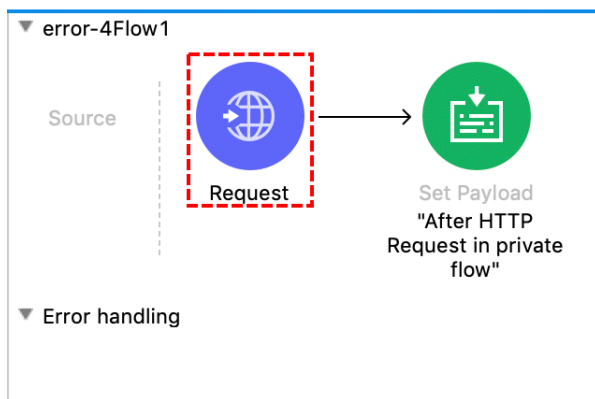

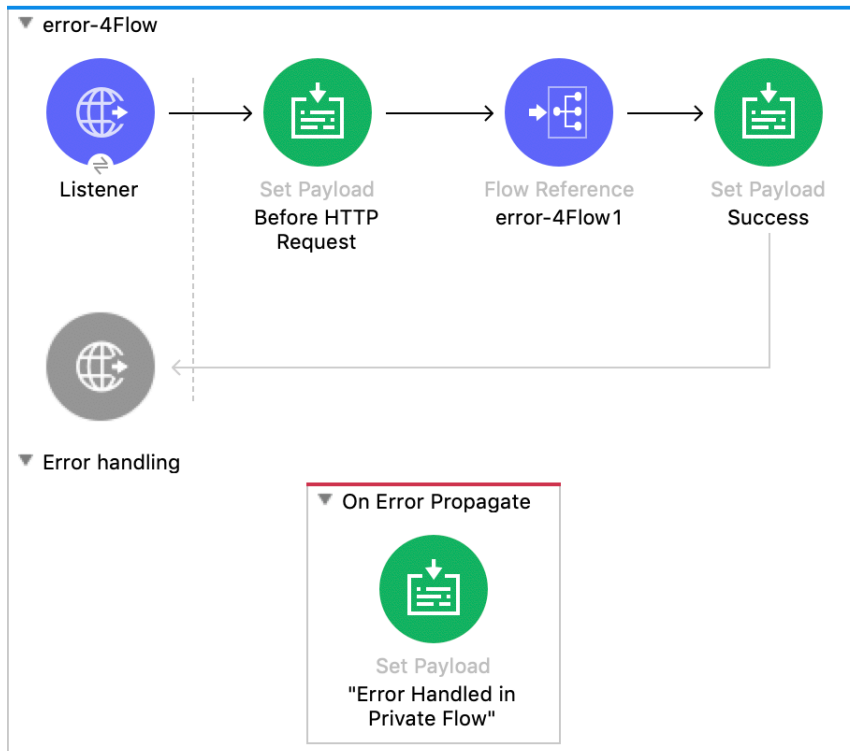

Scenario 1:

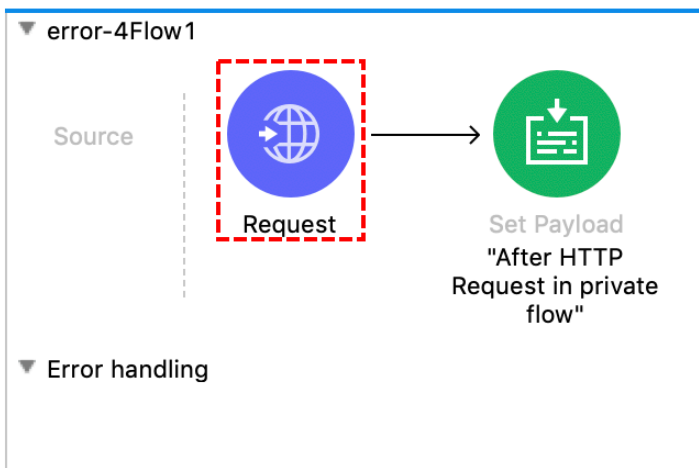

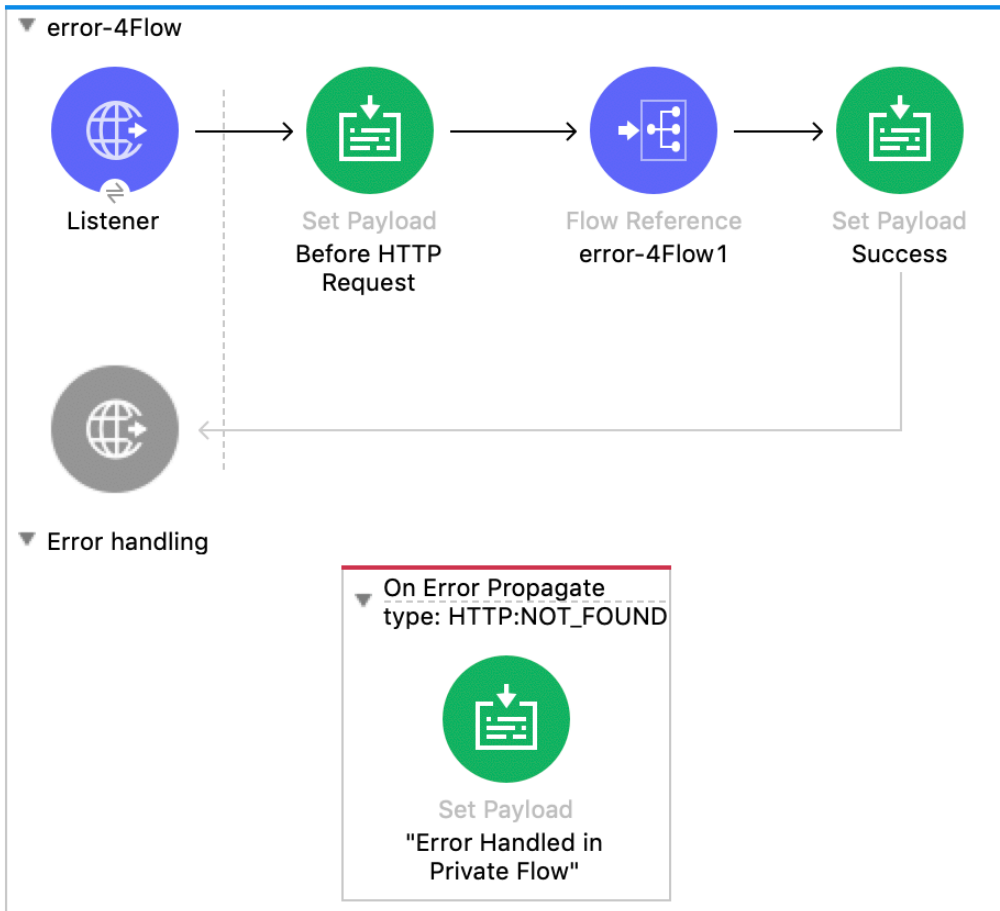

Scenario 2:

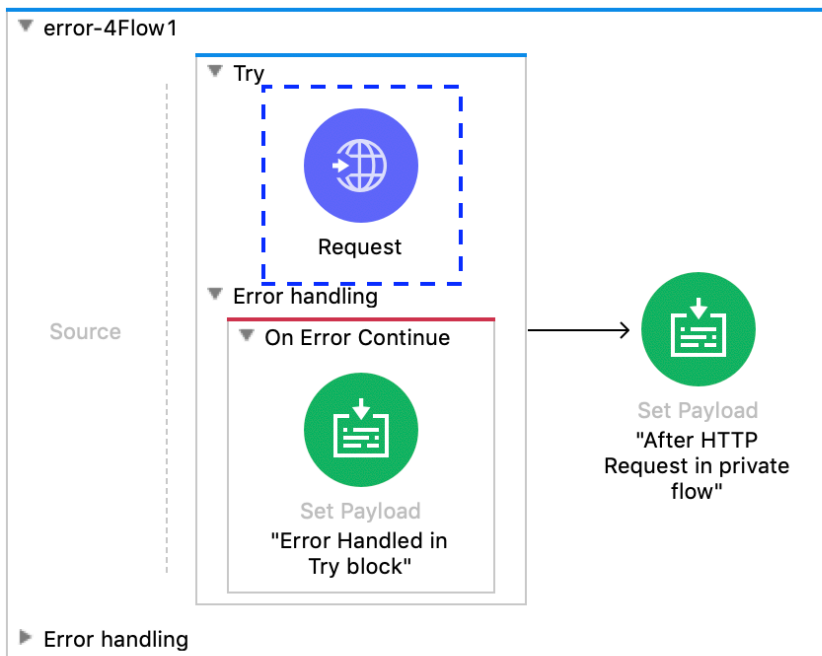

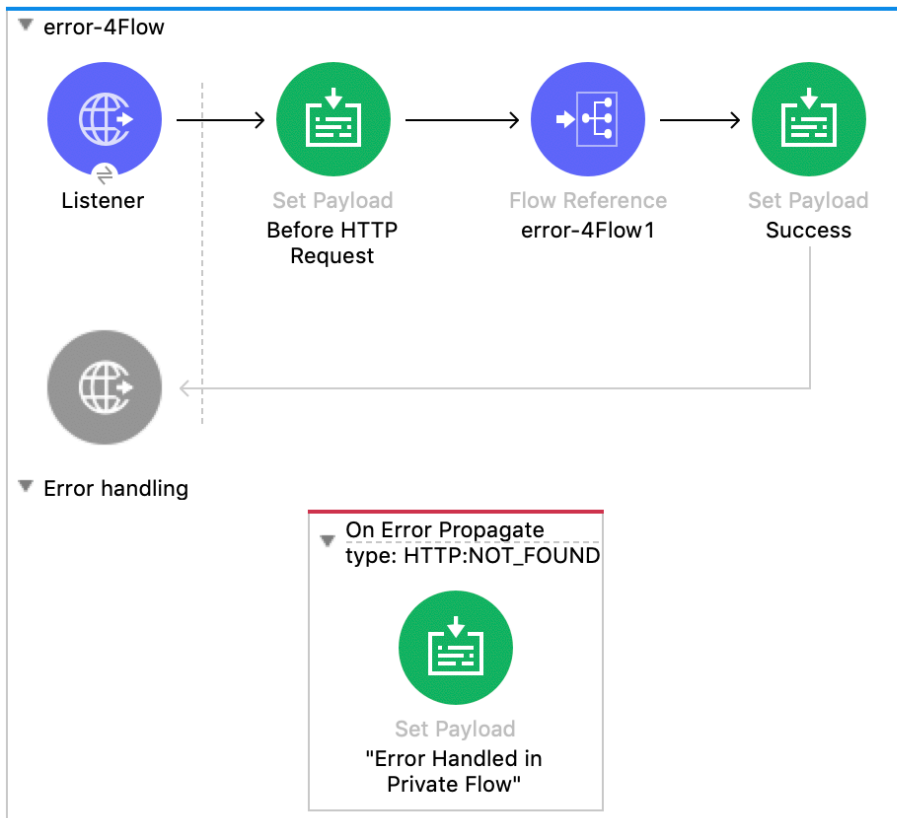

Scenario 3 :

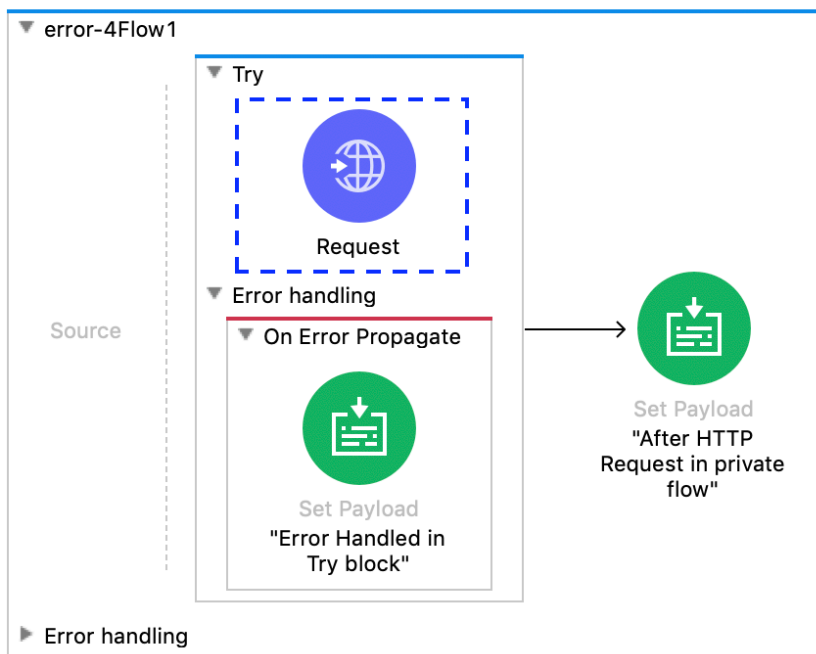

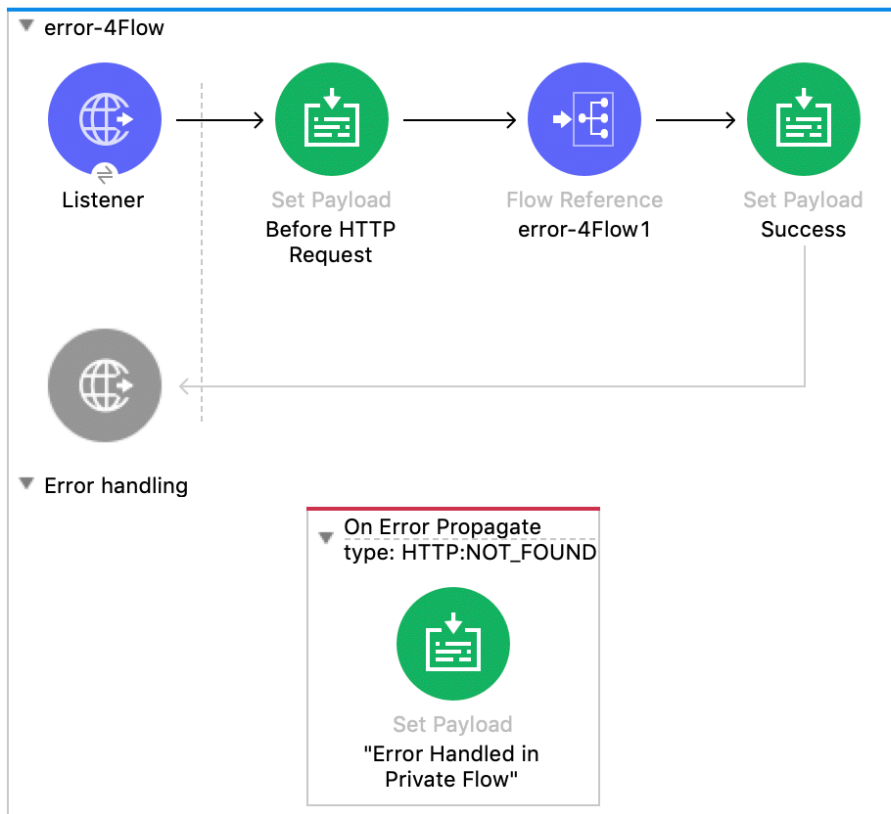

Scenario 4 :

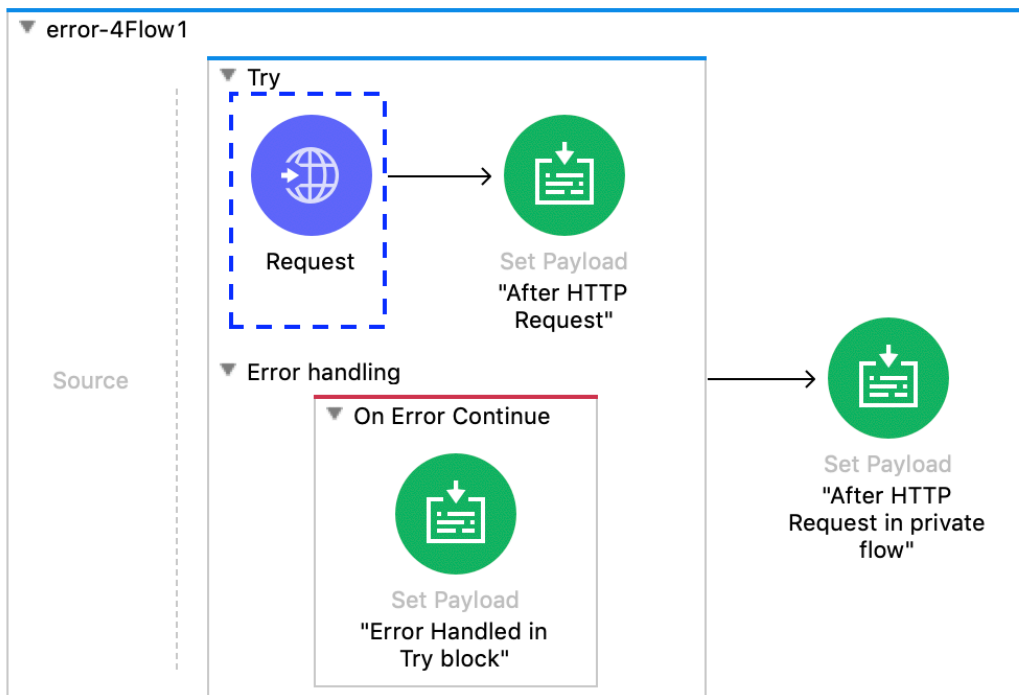

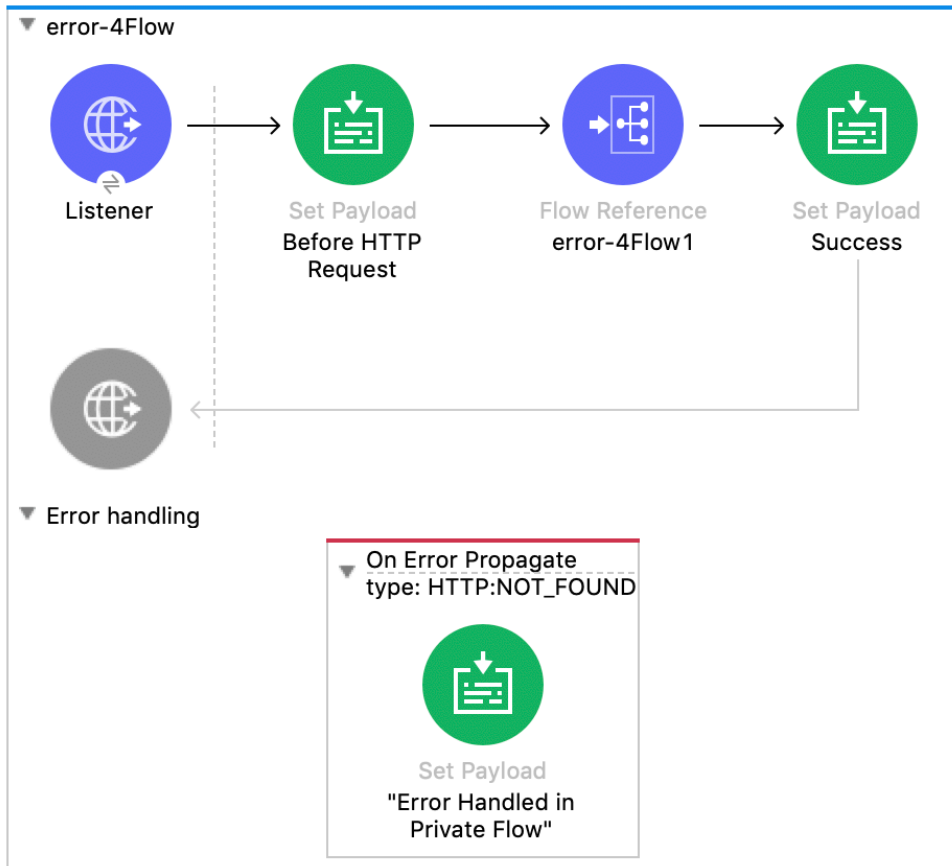

Scenario 5 :

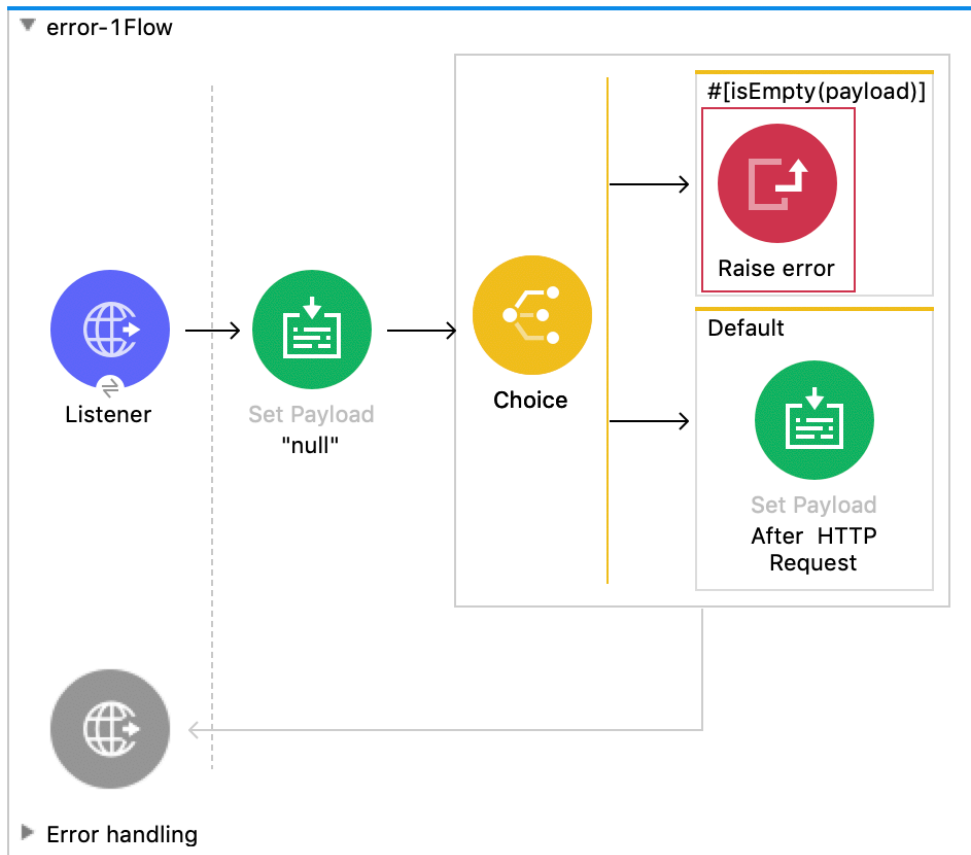

Scenario 6:

Scenario 7:

Scenario 8 :

Message Flow Global Elements Configuration XML

✖ Raise error
🔍 Problems
📄 Console

✅ There are no errors.

General

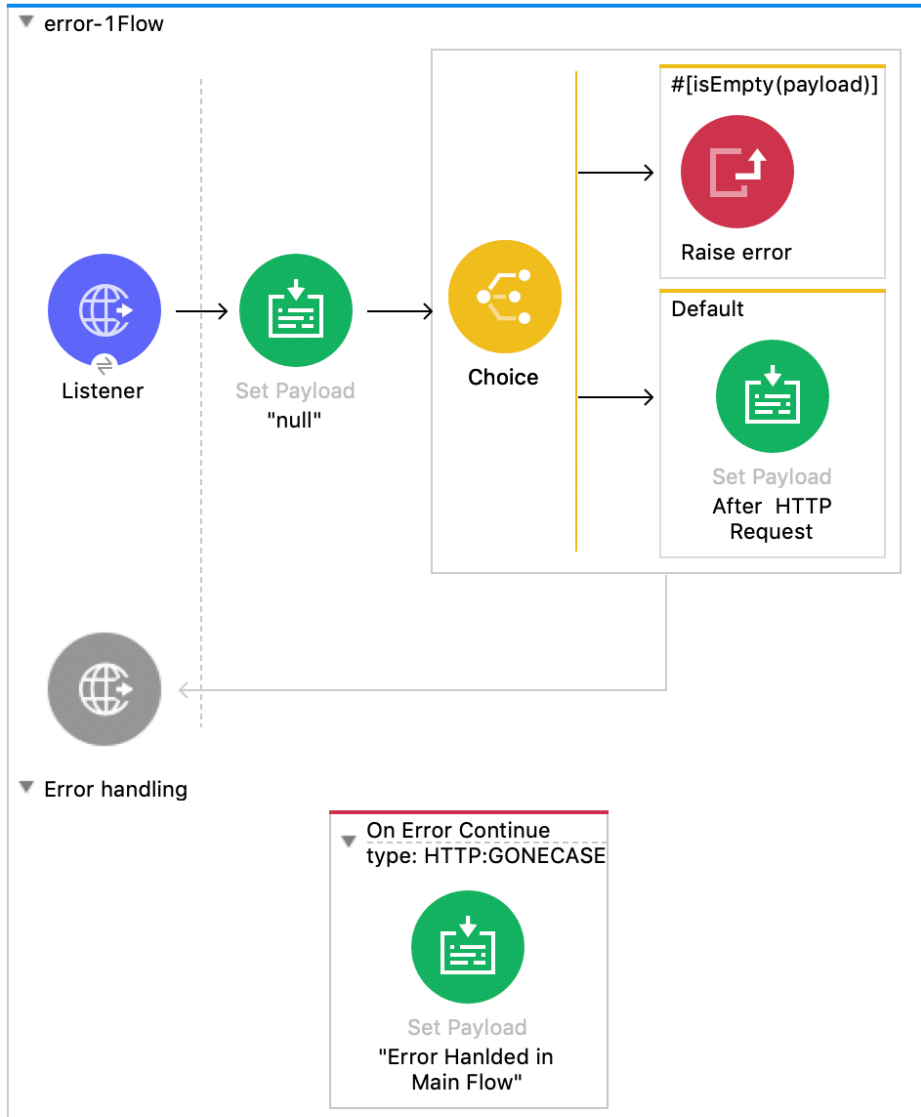

Display Name:

Settings

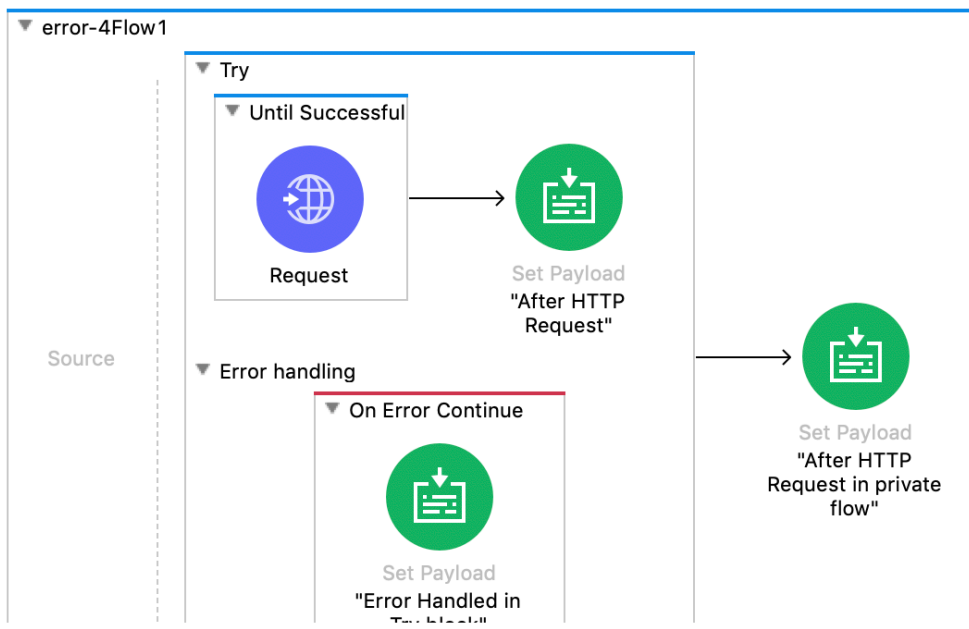

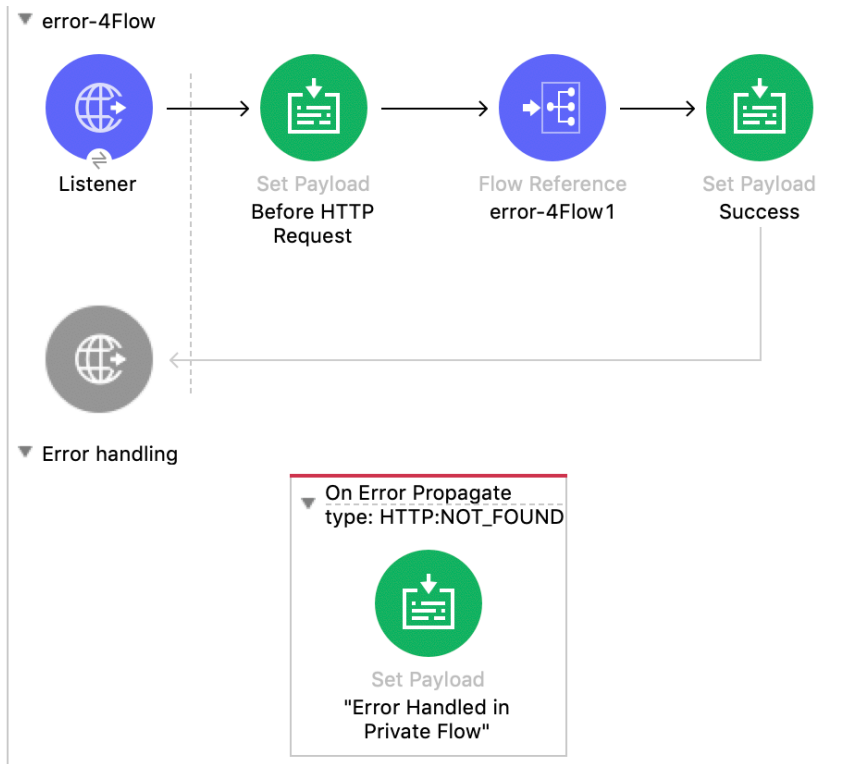

Type:

Description:

Scenario 9 :

Scenario 10 :

Before Answering , Note all Scenarios has Global error handler which I have shared screenshot at the starting. You have to consider that for every scenario .
